

NETfinder Plus

The NETfinder Plus is a versatile and convenient tester, it can test both net and telephone cables. The NETfinder Plus includes a tone generator, port-finder, cable organizer and memorized quick tester.

The NETfinder Plus tests for all standard wiring faults and displays the results via a pin-to-pin method. The fault status is displayed on a large alphanumeric LED display and 9 additional LEDs indicate the corresponding tested wires.

Features

- All-in-one tester: Tests net and telephone cables. Includes tone generator, port-finder, cable organizer, and quick test
- Tests for the following wiring faults: opened, shorted, reversal, crossed, and split pairs
- Pin-to-pin indication (net cable)
- Tests for wiring faults of short and open (telephone cable)
- Verification of shield/ground integrity
- Split pair fault detection at a minimum 3 meter cable length
- Tests for twisted pair cables to over 490 ft. (150 meter)
- Tone generator function is compatible with most cable traces on the market
- Cable organizer: 8 numbered remote IDs for organizing 8 cable locations
- Port-finder: Locates the 10/100M hub/switch for the corresponding port
- Quick test: Memorizes a cables pin out and tests for mass cables
- Remote unit enables one person to test installed cables
- Easy to read alphanumeric LED faults display
- Low battery indicator

Order information

256777 NETfinder Plug Multi-function Network/Telecom cable tester with quick memorized function for mass cable test & port-finder/tone generator

LED faults display

Ready

Good

Tone generator

Split pairs

Open pairs

Mis-wire

Short pairs

Reversal pairs

Crossed pairs

Low battery

If the main unit detects that a remote ID exists, the remote ID's LED will light and the alphanumeric LED will display the corresponding ID # (1,2...8) at the same time

This tester provides two different tone signals, you can trace the signal by using a probe. Use "Test" button to switch between the two different tone signals

Tele cable test, the 6 pin LEDs and alphanumeric LED display the cable status. The corresponding pins will flash if its good, and the alphanumeric LED will display a "G"

Mode	A	B
1	tel test	tone generator
2	port-finder	wire mapping
3	organizer	quick test
