

Key Selling Points

View temperature split and psychrometric calculations on your smart device

Wireless Hygrometer

The WHP1 features the thinnest probe at 1/4" diameter, which means smaller drill holes than current probes on the market. The magnetic mount holds the WHP1 onto the plenum at 90 degree angle placing the probe in optimum position for air stream measurements.

Solid Connection

Once a probe is assigned to a part of the system, it will automatically reassign that probe each time the App is launched. The latest wireless technology allows up to 150 ft. connectivity range pending environmental conditions, so if the connection does drop, the probe will automatically reconnect to the App.

UEi HUB App

The UEi HUB App shows temperature split and psychrometric calculations in an intuitive easy-to-read display. Users can view basic "Air Side" measurements or see all measurements and calculations at once. The user-friendly navigation bar allows users to quickly change units or make altitude compensation adjustments for more accurate air property readings at higher altitudes.
