

AIR PURIFICATION TECHNOLOGY

Dust Free® tested its PCO and Ionization technology against SARS-COV-2 (Covid-19), MS-2 Bacteriophage, and Staphylococcus Epidermidis in three different lab settings and test results have shown the ability to successfully reduce all three pathogens.

Dust Free®'s ASHRAE 52.2 tunnel/chamber test utilized in the MS-2 Phage and Staph is a rigorous test protocol. Unlike the Dust Free® test protocol, the majority of duct mounted purifiers sold through the HVAC distribution channel are tested in a more controlled lab setting, in a small box, with little to no air movement other than a fan positioned to blow on the device being tested. The pathogen is put on a stainless steel coupon and the test is run for 24 hours. This protocol does not accurately reflect how the device will perform in a typical ducted HVAC system. For this reason, most manufacturers do not disclose their test protocol.

Dust Free®'s test protocol is much more reflective of what can be expected in a typical ducted system. To our knowledge Dust Free® is the only manufacturer of duct mounted air purifiers that has tested to this rigorous protocol.

**UNIVERSITÀ
DEGLI STUDI
DI MILANO**

Test results show **Dust Free®'s proprietary Active Technology to be 99.7% effective in the reduction of the SARS-COVID-2 virus within 20 minutes.**

Dust Free®'s proprietary air purification technology was tested for efficacy at reducing SARS-COV-2 by the University of Milan in Milan, Italy on September 11, 2020. The test was conducted within the Department of Biomedical and Clinical Sciences and supervised by Davide Mileto, a Microbiologist with the University of Milan Luigi Sacco Hospital.

MS-2 Phage has been found to be 8-10 times more difficult to kill than COVID-19 by the National Center for Biotechnology Information. **The Dust Free® air purification technology showed a 15% reduction of the airborne pathogen every half hour.**

MS-2 Bacteriophage (MS-2 Phage) testing was conducted at LMS Labs in Minneapolis, Minnesota. The pathogen was aerosolized into a 2000 cubic foot chamber connected to an ASHRAE 52.2 tunnel with the Dust Free® technology installed in the duct outside the chamber.

Staphylococcus Epidermidis has been identified as one of the most difficult bacteria to kill by National Center for Biotechnology Information. **The Dust Free® air purification technology showed a 15% reduction of the airborne pathogen every half hour.**

Staphylococcus Epidermidis testing was conducted at Airmid Labs in Dublin, Ireland. The pathogen was aerosolized into a 2000 cubic foot chamber connected to an ASHRAE 52.2 tunnel with the Dust Free® technology installed in the duct outside the chamber.
