This rugged stainless steel sensor is available in 4 different cell classes, making it the perfect choice for high temperature applications.

The ProCon® C950 series double electrode conductivity sensor has been proven to operate seamlessly in industrial applications up to 200,000µS/cm.

Industrial environments can be harsh, featuring corrosive substances and fluctuating temperatures. The ProCon® C950 series conductivity sensor transmitter is built with durability in mind. Constructed from rugged materials such as corrosion-resistant 316SS and double shielded cable, this robust build ensures longevity and reliability in high temperature applications. Pair it with a ProCon® conductivity controller (featuring SimplCal®) for a truly seamless experience.

The ProCon® line of analytical sensor transmitters have been designed for difficult industrial applications and to outperform even in extreme conditions.

The 2-wire 4-20mA, 4-wire or 4-20mA + RS485 output options simplify calibration and communication with remote displays and controllers.

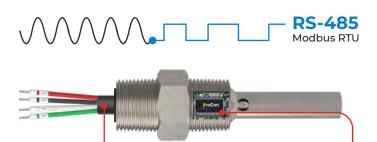

Always ask for **ProCon® C950** by name to be sure you are getting a genuine **Icon Process Controls** product.

- Water Treatment
- Pharmaceutical
- Food and Beverage
- Interface Detection
- Operation
- Chemical Plants
- Aquariums
- Agricultural Industries

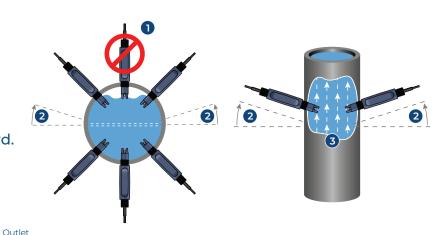

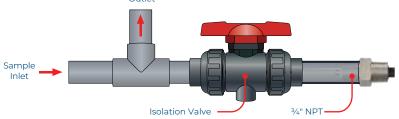

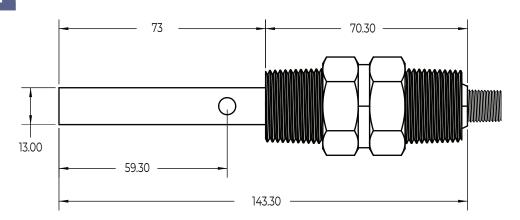

In-line Mounting

- 1. If air is present, avoid vertical installation (okay if pipe is full).
- 2. Optimum installation 15° above horizontal.
- Process liquid should flow upward. (for downward flow ensure backpressure is present in order to avoid air within pipe)
