The **LP200 Pressure Transmitter** was designed to measure pressure or level within industry's most demanding corrosive process applications. When measuring pressure, it can be mounted vertically or horizontally, and can easily be installed into a threaded process pipe tee fitting.

The LP200 implements a state of the art ceramic measuring principle that changes the physical pressure (which equates to no more than a few microns), into a linear electronic signal that can be measured. This minimal deformation applies negligible material strain on the ceramic electronic pressure-sensing diaphragm, resulting in high resistance to alternating loads and long-term durability. Perfect for tough industrial applications.
